Testing of Animal & Plant-derived Components

With consumers' awareness of their rights increasingly growing and their demands for product label transparency and authenticity rising, "whether the ingredients match the claims" has become a core concern in industries such as food, dietary supplements, and feed. Testing for animal- and plant-derived ingredients plays a crucial role in food safety regulation, religious, dietary compliance, allergen avoidance, and vegetarianism choices.

By amplifying and detecting specific DNA sequence, qPCR can accurately determine whether food contains a certain ingredient, ensuring the authenticity and accuracy of food labels.

Metagenomics (NGS Platform) can quickly and accurately identify adulterated ingredients in food by analyzing the composition gene information of all organisms in food, ensuring food safety and quality and avoiding food fraud.
